

# Contents

<b>1</b>	<b>INTRODUCTION</b>	<b>1</b>
1.1	Previous Work . . . . .	2
1.1.1	Parallel Computer System Modeling . . . . .	2
1.1.2	Object-Oriented Synthesis . . . . .	4
1.1.3	Intelligent Fuzzy Concurrent Design . . . . .	5
1.1.4	System Simulation and Performance Evaluation . . . . .	7
1.1.5	Formal Synthesis Model . . . . .	7
1.2	Contributions and Organization . . . . .	8
<b>2</b>	<b>CONCEPTS AND TECHNIQUES</b>	<b>10</b>
2.1	Object-Oriented Modeling . . . . .	10
2.1.1	Object-Oriented Structure . . . . .	11
2.1.2	Object-Oriented Relationships . . . . .	13
2.2	Object-Oriented Synthesis . . . . .	15
2.3	Machine Learning . . . . .	16
2.4	Fuzzy Design-Space Exploration . . . . .	18
2.5	Concurrent Synthesis . . . . .	19
2.6	Object-Oriented Simulation . . . . .	20
2.7	Summary . . . . .	21
<b>3</b>	<b>PERFORMANCE SYNTHESIS METHODOLOGY</b>	<b>23</b>
3.1	Introduction . . . . .	24
3.2	Problem Specification and Input Descriptions . . . . .	25
3.2.1	Problem Specification . . . . .	25
3.2.2	System Input . . . . .	26
3.3	Performance Synthesis Methodology . . . . .	36
3.3.1	Map to Architecture Models Phase . . . . .	37
3.3.2	Generate System Configurations Phase . . . . .	39
3.3.3	Synthesize Architecture Phase . . . . .	40
3.3.4	Top-Down Topology . . . . .	52
3.4	Application Examples . . . . .	53
3.4.1	Cluster Array Processor . . . . .	54
3.4.2	Sorting Example . . . . .	59
3.4.3	Other Examples . . . . .	61
3.5	Summary . . . . .	63
<b>4</b>	<b>OBJECT-ORIENTED CONCURRENT SYNTHESIS METHODOLOGY</b>	<b>66</b>
4.1	Introduction . . . . .	66
4.2	Previous Work and Motivation . . . . .	67
4.3	Object-Oriented Concurrent Synthesis Methodology . . . . .	69
4.3.1	Specification Language . . . . .	69

4.3.2	Specification Analysis Phase . . . . .	73
4.3.3	Concurrent Design Phase . . . . .	74
4.3.4	System Integration Phase . . . . .	84
4.4	Application Examples . . . . .	89
4.4.1	Example 1 . . . . .	90
4.4.2	Example 2 . . . . .	96
4.4.3	Example 3 . . . . .	101
4.4.4	Observations . . . . .	104
4.5	Summary . . . . .	105
<b>5</b>	<b>MULTI-TOKEN OBJECT-ORIENTED BI-DIRECTIONAL NET</b>	<b>107</b>
5.1	Introduction . . . . .	108
5.2	Concurrent Synthesis and Motivation Goals . . . . .	109
5.2.1	Concurrent Object-Oriented System-Level Synthesis . . . . .	109
5.2.2	Motivating Goals . . . . .	111
5.3	Multi-token Object-Oriented Bi-directional Net Model . . . . .	112
5.4	Model Validation . . . . .	119
5.5	Modeling Design Completion Check . . . . .	126
5.6	Modeling Synthesis Rollback . . . . .	131
5.7	Application Examples . . . . .	135
5.7.1	Example 1 . . . . .	135
5.7.2	Example 2 . . . . .	139
5.8	Summary . . . . .	142
<b>6</b>	<b>MULTI-LEVEL INTELLIGENT SYNTHESIS AND SIMULA-</b>	
	<b>TION ENVIRONMENT</b>	<b>143</b>
6.1	Introduction . . . . .	143
6.2	Related Research Results . . . . .	144
6.2.1	Fault-Tolerant Multistage Interconnection Networks . . . . .	145
6.2.2	Multiprocessor Task Scheduling . . . . .	146
6.2.3	Hypercube Programs . . . . .	147
6.3	Multi-level Intelligent Synthesis and Simulation Environment . . . . .	148
6.3.1	Multiprocessor Modeling . . . . .	150
6.3.2	Multiprocessor Synthesis . . . . .	153
6.3.3	Multiprocessor Simulation . . . . .	156
6.3.4	MISSE Design Levels . . . . .	164
6.4	Comparison between PSM and OOCMS . . . . .	168
6.5	Summary . . . . .	169
<b>7</b>	<b>CONCLUSION AND FUTURE WORK</b>	<b>171</b>
